

## Plastic Bottle Planters

### Step 1: Materials Needed

#### Materials:

Craft knife or a pair of scissors (be careful)

measuring device (a ruler would qualify)

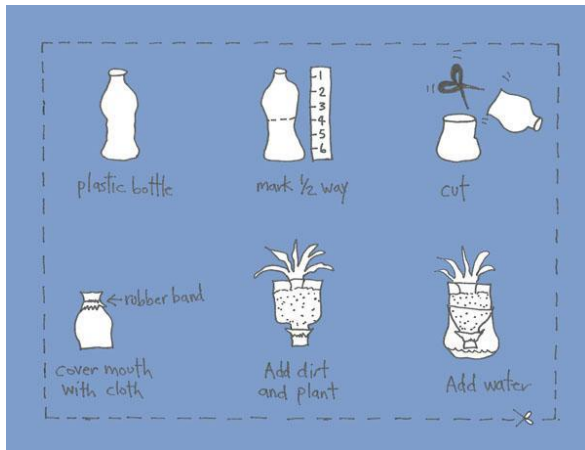

plastic bottle (it's a no starter without one)

**muslin fabric (about a 2" diameter circle) or a piece**

What can I use if I don't have muslin cloth?

1. Kitchen Towel. The first and possibly easiest substitute to locate is a kitchen towel. ...
2. Coffee Filters. Reusable or disposable
3. Paper Towel. ...
4. Muslin Fabric. ...
5. Cotton Handkerchiefs.

Step 2:

1. Mark 1/2 way on the bottle (this does not have to be exact, just somewhere close to the middle).
2. Cut the bottle on your mark
3. Take the cap off
4. Take the muslin or cloth and cover the mouth of the bottle. Secure the fabric with the rubber band or a piece of string around the neck of the bottle.
5. Take the top half of the bottle and fill it with dirt about half way up.
6. Take a small plant and put it on top of the dirt. Take more dirt and fill in around the edges. Make sure you have about 1" of space above the dirt to the top of the container.
7. Put the top 1/2 of the bottle into the bottom 1/2.
